

Custom Configuration

This document demonstrates how to use a custom Typst configuration file to override the default template settings.

By using the `--config` or `-c` flag, we have changed the following settings:

- **Language:** Set to German (de).
- **Region:** Set to Germany (DE).
- **Paper Size:** Set to a5.
- **Authors:** Custom author list defined in the config file.

How to run this example

```
python3 convert.py examples/custom-config/  
document.md --config examples/custom-config/  
custom_cfg.typ
```

Or set it in the frontmatter:

```
user-config: customcfg.typ
```

Note

Don't use characters that get escaped (like `\` or `_`) by pandoc as a config file name.
